

Knowledge into Action (KIA) workshop...

Challenges and opportunities in using public health intelligence

and reduce health inequalities"*

Today's workshop

Moving beyond what we know about getting knowledge into action...
...to what we can do, together, to get knowledge into action more effectively

This workshop therefore focuses on applying our shared expertise and experience to real-life public health intelligence challenges.

Today's workshop – aims & outcomes

“How can we work together to get knowledge into action?”

By the end of the workshop session we should have:

- A set of examples of public health intelligence work that showcase challenges in getting knowledge into action
- Some connections established within this workshop setting that will provide support for that work
- Ideas for establishing this kind of collaboration and support more widely

Today's workshop – structure

Introduction to workshop (5 mins)

Group work – part 1 (15 mins)

- Identify a 'live' example of public health intelligence work for discussion. Describe the key elements of that work and the KIA challenges. Discuss what support could be helpful in overcoming barriers and ensuring that the work achieves the goal of getting knowledge into action.

Plenary – Part 1 (15 mins)

- Outline two of those examples for the wider group and determine what support (e.g. resources, shared learning, collaboration, examples of previous work, etc.) might be available, and where the gaps are

Group work – part 2 (10 mins)

- Discuss how we might achieve collaboration and support around KIA in day to day work – 3 key points!

Plenary – part 2 (10 mins)

- Feedback from part 2, summing up, planned follow up
