This is one of a set of 38 Health and Wellbeing Profiles for Scottish Community Health Partnerships (CHPs)*, published by the Scottish Public Health Observatory (ScotPHO) collaboration and updating profiles previously published in 2008. Additional profiles focusing on the health and wellbeing of children and young people in Scotland are also available. All profiles are available on the ScotPHO website at [www.scotpho.org.uk/profiles](http://www.scotpho.org.uk/profiles).

Our aim is to support health improvement in Scotland by providing clear and relevant information that will help service providers, planning teams, policy makers and the public make informed decisions to improve health.

This profile contains:

- A map of the area and demography table
- ‘At a glance’ commentary on the findings for the area
- A spine chart detailing 59 indicators across 10 domains
- Time trend and rank charts for eight key indicators
- A table of definitions and sources for all indicators
- Details of other Profiles 2010 products.

While there may be additional sources of information in some local areas, these indicators have the strength of being available in a consistent form for all of Scotland, allowing valid comparisons to be made. They should be interpreted in the light of local knowledge.

*CHP is used as a global term to refer to all Community Health Partnerships (CHPs) / Community Health & Care Partnerships (CHCPs) / Community Health & Social Care Partnerships (CHSCP or ChSCP) in Scotland. However, instead of including five CHPs for Glasgow City we have presented the results for three areas, covering Glasgow North East, Glasgow North West and Glasgow South. This gives a total of 38 comparator areas for the 2010 Profiles.

These 38 areas nest within 32 councils (local authorities) in Scotland. In most cases, the CHP and council area are coterminous, but Glasgow, Fife and Highland Council areas contain a number of CHPs. Where indicators are unavailable at CHP level, data for the relevant council area are presented instead.

### Area Population: 220,489

| National insurance registrations for migrant workers | 2.1 | 1.3 |
| Live births | 3,013 | 13.7 | 11.6 |

1. Measure shown as percentage of the total population
2. Measure shown as percentage of working age population
3. Data reported for relevant council (local authority) area
4. Measure shown as a crude rate per 1,000 population
Population Profile
South Glasgow has an estimated total population of 220,489. The percentage of the total population who are of working age is significantly higher than the Scottish average whilst the population aged 75 years and over is significantly lower. National Insurance registrations for migrant workers are significantly higher in Glasgow City Council area compared to the Scottish average.

Life Expectancy & Mortality
Male and female life expectancy (70.8 and 77.3 years respectively) in South Glasgow is significantly lower than the Scottish average (74.5 and 79.5 years respectively), although it has been rising steadily over time. Mortality rates from all causes (all ages), coronary heart disease (under-75s), cancer (under-75s) and cerebrovascular disease (under-75s) are all significantly higher (worse) than the Scottish average.

Behaviours
An estimated 32.0% of adults smoke in the council area, compared to 25.0% in Scotland as a whole. In South Glasgow there have been 801 deaths from alcohol conditions in the last five years and the death rate is significantly higher than the Scottish average. The proportions of the population hospitalised with alcohol conditions and with drug related conditions are significantly higher (worse) than the Scottish average. Levels of sporting participation in the council area are significantly lower than average.

Ill Health & Injury and Mental Health
Cancer registrations, and the proportions of the population hospitalised for coronary heart disease, COPD, cerebrovascular disease, emergency admissions, and multiple admissions (65 years and over), are all significantly higher (worse) in South Glasgow than the Scotland average. However, the rate of patients hospitalised after a fall in the home (65 years and over), and the road traffic accident casualty rate, are both significantly lower than average. Drug prescribing for mental health problems is significantly higher than the Scottish average, as is the suicide death rate (19.5 compared to 15.1 deaths per 100,000 population).

Social Care & Housing
South Glasgow has a significantly higher percentage of adults claiming incapacity benefit/severe disability allowance than the Scottish average. The percentage of single adult dwellings is also significantly high. Within the council area, both homelessness and the rate of children looked after by the local authority are significantly higher than average. Extreme fuel poverty is significantly lower (better) in the council area (6.5%) than Scotland (7.5%).

Education & Economy
Primary and secondary school attendance rates in South Glasgow are significantly lower than the Scottish average. Levels of income and employment deprivation, the percentage of working age population claiming Jobseeker’s Allowance, dependence on out of work benefits or child tax credit, and people claiming pension tax credits, are all significantly higher than the Scottish average.

Crime and Environment
The crime rate in South Glasgow is significantly higher than the Scotland average. Rates of referrals to the Children’s Reporter for violence-related offences, and rates of patients hospitalised following an assault, are also significantly higher than average. The percentage of the population living within 500 metres of a derelict site (46.9%) is significantly higher than the Scottish average (30.0%).

Women's & Children's Health
Breast screening uptake (68.7%) is significantly lower than the Scottish average (75.3%). The prevalence of pregnant mothers who smoke is significantly better (lower) than average. The percentage of babies exclusively breastfed at 6-8 weeks is significantly lower than average, as is immunisation uptake at 24 months (excluding MMR). Child dental health in primary 1 is significantly worse than the Scottish average.
South Glasgow Health Summary

This chart compares the local value for each indicator to the Scottish average and range for all profile areas.

- Statistically significantly 'worse' than Scottish average
- Statistically not significantly different from Scottish average
- Statistically significantly 'better' than Scottish average
- Statistically significant difference compared to Scottish average
- No significance can be calculated

Notes:
1. Five-year combined number, and 5-year average annual measure.
2. Three-year combined number, and 3-year average annual measure.
3. Data available down to local authority level only.

Key:
- n/a = data not available, or cannot be calculated; cr = crude rate per 100,000 population; cr2 = crude rate per 1,000 population; sr = age-sex standardised rate per 100,000 population; sr2 = age-sex standardised rate per 100 population yrs = years; % = percent; mean = average.
- See the detailed Definitions and Sources table for indicator information and Technical Report (on the web) for further guidance on interpreting the spine.
